

HK Vacation

Background

The website Hong Kong Vacation is a tourist website to help visitors from all over the world to know about Hong Kong and how to improve their travel experience while in Hong Kong.

The website intends to provide people visiting HK with the destination, dining and shopping information. Visitors who want to seek accommodation in HK can find the information they need on Hong Kong Vacation.

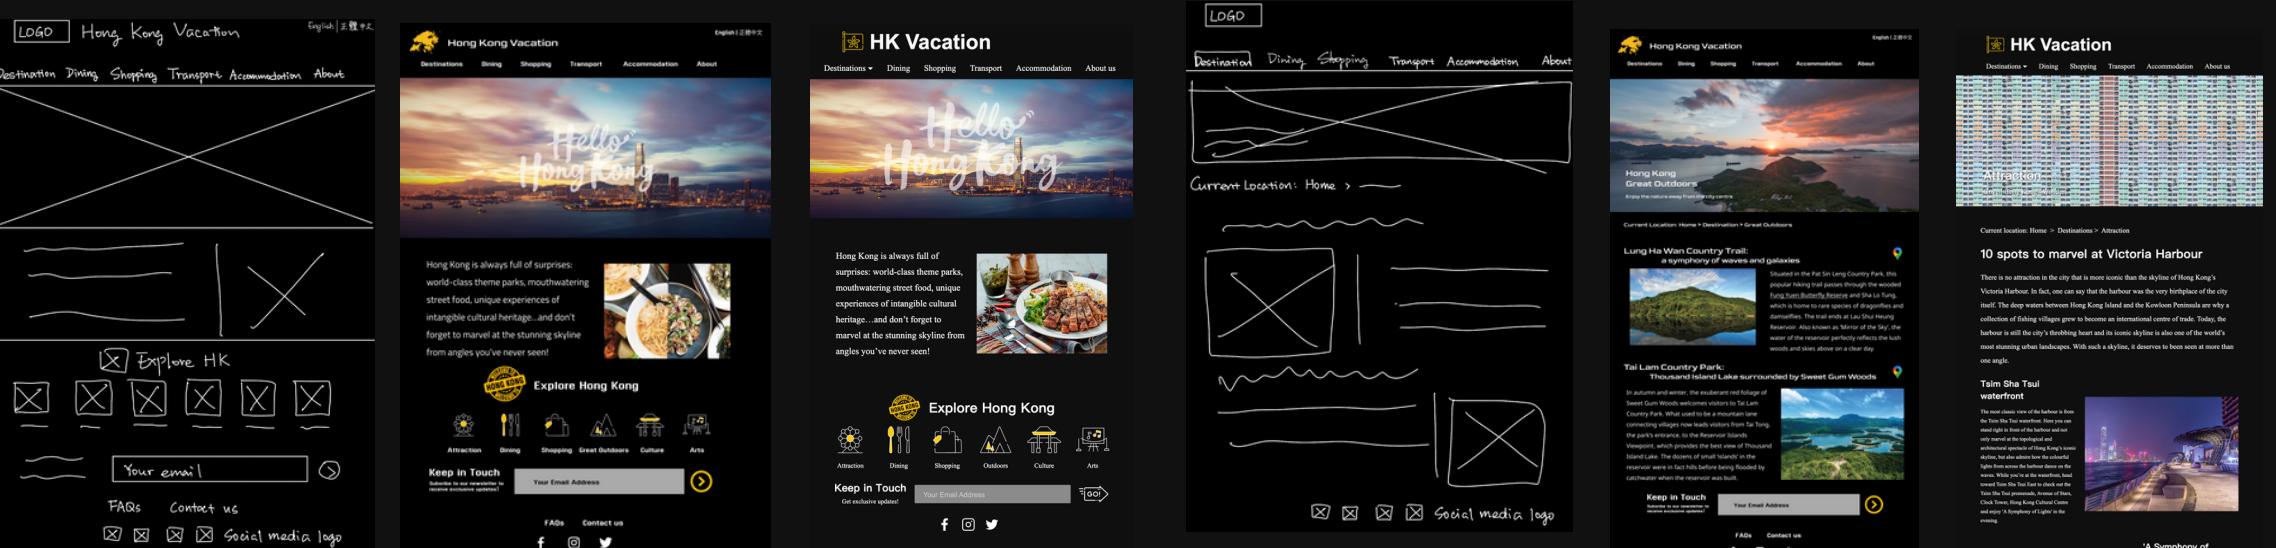

Site Map

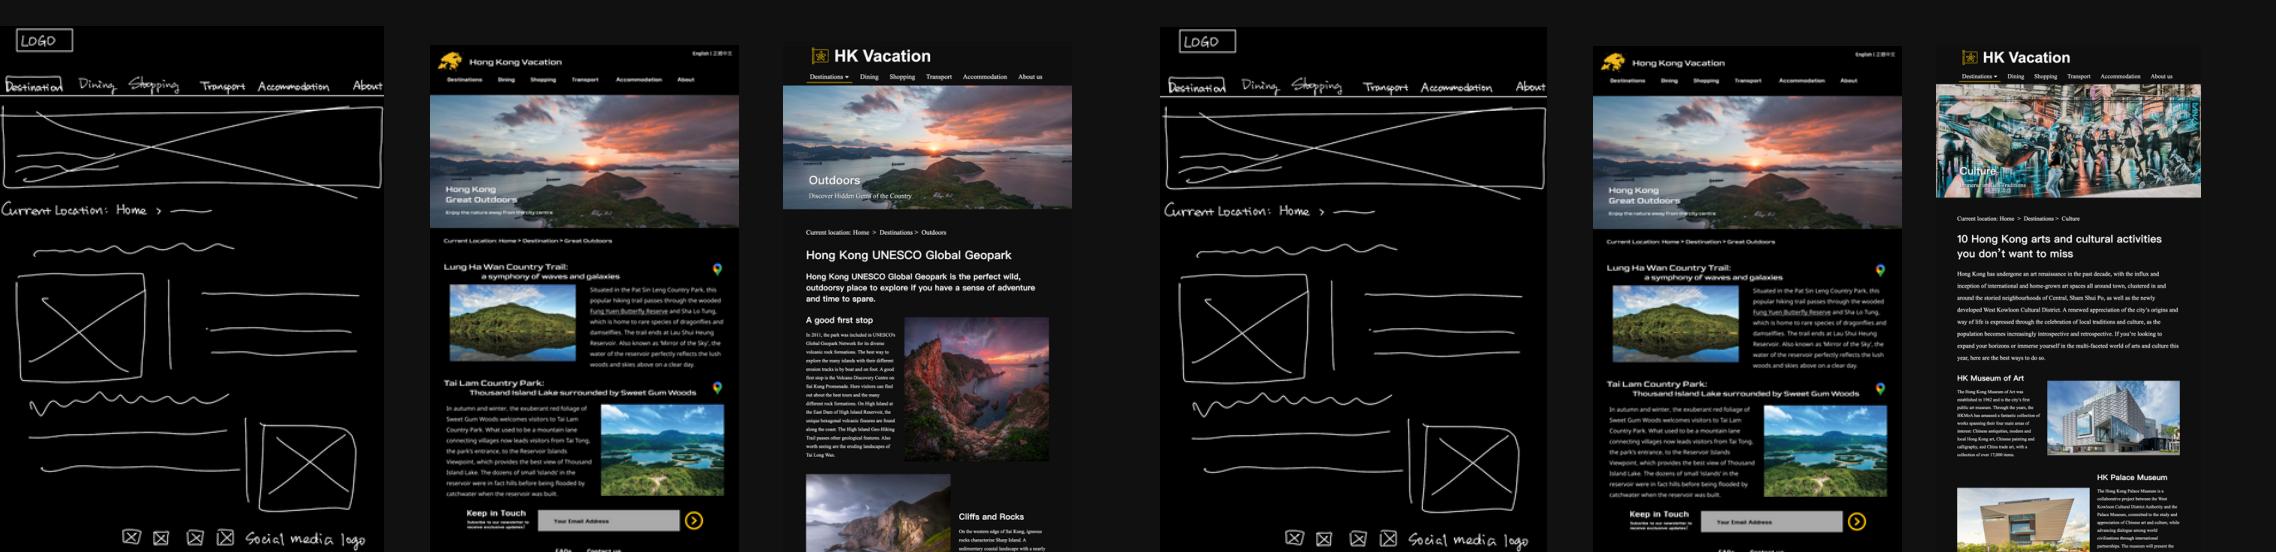

Website Features

- Underline in the navigation bar to indicate which page users are visiting.
- When clicking on the menu button on the top-left corner of the mobile page, the sidebar will be shown from the left and the original part of the site will be darken. When clicking the menu button again or just simply clicking on the darken part, the side bar will be hidden again.
- The navigation bar is always on the top of the window on the desktop page.
- The website uses yellow and white colours to form the style with a black background.
- The desktop pages use 20px as the main font size while the mobile pages uses 5vw.
- When the system is in dark mode, the colour of the icon on the browser tab will change to yellow from black.
- The website supports the responsive design. The layout is different in computers and in mobile phones.
- The website detects the validation of input. An indicator will be shown in the middle of the browser tab to tell whether the email entered is valid or not, or users entered nothing.
- The website provides a breadcrumb navigation bar to display the current location.
- When there is a mouse hover, the colour of link, including texts and icons, will change to yellow from white. Additionally, as for the three social media icons at the bottom, there will be a clip-path use for changing colours.

Potential audience

- People who have never been to HK plan to go travelling to HK. This website provides brief introduction to HK and gives useful information for their trip.
- People who has been to HK and found their passion in this city want to explore HK again. This website continuously offers valuable content to the travellers, such as the upcoming HK Pop Culture Festival.

Reflection

Through builing this website, I mastered most of use of HTML. I master most of <tag> in HTML so that I am able to add words and media into a web page quickly. Additionally, I am able to successfully select the specific HTML element in CSS and set the style of this elements so that I can make a captivating layout. I mastered the method of "class" and "inheritence" in CSS , such as using that when several <div>s use the same style while one <div> uses slightly different styles from other <div>s, which saves a lot of time and make the framework clearer. Furthermore, I understood the use of JavaScript. I am able to add an event listener to a <tag> for interaction, such as the responsive deisgn in this website.

Future work

More features can be added to enhance the website. This website is lack of backend, which means the database system has not been built so that "search filter" and the "subscribe" are still under construction. In the future, the database system will be built and these two functions will be available. Additionally, the interaction could have been more fascinating. In the future, the interface will be more amazing with more and more JavaScript use.
